

Availability of SID Data Elements by State in 1990-1994

The 1990-1994 HCUP Central Distributor SID databases are split into 3 files:

Core	Contains the data elements that are provided by most state Data Organizations which can be uniformly coded across states, and state-specific data elements that are available from a few state Data Organizations and usually retain state-specific coding.
Charges	Contains data elements related to detailed charges information.
AHA Linkage	Contains hospital identifiers used by the data sources, the AHA, and by HCUP.

Because the Data Organizations decide which elements may be released on the HCUP Central Distributor databases, not all data elements will be available for all States.

The availability of data elements and their location within the different file types (e.g., Core, AHA Linkage, etc.) varies across years and states. Specific information is available in the following documents:

- **Availability of SID Data Elements by State in 1990-1994** (this document)
- **Availability of SID Data Elements by State in 1995-1997** (on the SID Documentation CD-ROM)
- **Availability of SID Data Elements by State in 1998-2002** (on the SID Documentation CD-ROM).

The following table (page 2) shows for the 1990-1994 files:

- the location of each data element within the different SID files, and
- the availability of data elements across the individual states.

The first column specifies the data element. The next three columns identify the three types of SID files. The remaining columns refer to the states using the state postal code (e.g., AZ for Arizona, CO for Colorado). Cells marked with an "x" indicate that the data element is available for that file or state. Blank cells indicate that the data element is not available for that file or state. Not all HCUP data elements are available for all states. For information on how the HCUP data elements are defined, refer to the **Description of SID Data Elements** (on the SID Documentation CD-ROM).

When multiple data elements of the same type are available, the number of data elements available is specified in the state cell. For example, the state cell for diagnoses (i.e., DXn) identifies the number of available diagnoses. AZ has 5 diagnoses: 1 principal diagnosis and 4 secondary diagnoses. Not all diagnoses are coded on all records.
